NIS CHAPTER IX MEMO 15
(REVISION)
Date 17 September 1957

MEMORANDUM FOR: NIS Chapter IX Contributors

SUBJECT : Citing maps in or from publications

1. The following form is recommended for citing maps in a publication:

Title of Map (Translation if foreign language); scale; in author of article, "Title of Article," [Nationality of authority if non-U.S.] Authority for Publication, Title of Publication, vol., No., date of volume, p. or pl. or fig. number; date of map if different from date of volume; language if non-English; graticule; availability.
Classification and control.

The call number given under "availability" is that for the publication.

2. Maps taken from a publication usually have an individual call number and are filed separately from the publication.

In cases where full information is available, the form of the citation is the same as that for maps in a publication except that "from" is substituted for "in" and the call number given under "availability" is that of the map -- not the publication.

If the publication in which the map was originally published is not known, the information in the citation will be that indicated on the map itself.
